

# **SUBMERSIBLE PUMP DEPLOYMENT AND RETRIEVAL SYSTEM**

## **Abstract**

The present invention relates to a system for deployment and retrieval of a submersible pump in a well. The submersible pump is deployed and retrieved by using a power conduit that conveys power to the submersible pump. More specifically, the power conduit has a substantially neutral buoyancy when submersed in the well fluid. The buoyancy reduces the mechanical loading of the power conduit when submerged in the well fluid.
